

Who Has the Top Home Automation SaaS?

Written by Marco Attard
13. 11. 2012

ABI Research releases the results of its latest Home Automation System (HAS) competitive assessment-- with Alarm.com, iControl and Control4 as top 3 vendors.

The assessment judges vendors not only by market share, but also through 3 vendor specific matrices covering performance and strategy.

Alarm.com and iControl only offer Software as a Service (SaaS) HAS offerings, while Control4 sells more traditional individual systems together with SaaS functionality and services.

According to ABI Alarm.com tops the "implementation " and "innovation" categories through a platform able to support many large deployments and a range of clients. iControl comes 2nd, thanks to early and successful partnerships and system deployments.

4Home shares a 2nd place with iControl by scoring well on application scope and breadth.

Meanwhile Control4 represents a vendor willing to support SaaS offerings alongside its existing channel.

Who Has the Top Home Automation SaaS?

"The SaaS market for Home Automation Services is proving key infrastructure for an explosion of investment, interest, and adoption of home automation systems," ABI concludes. "They are providing support for a range of large existing connected home services companies, such as telcos, cable companies, home security firms, utilities and others to extend their offerings into HAS services- promoting and popularizing HAS technology."
