BitWise Controls starts shipping of the long-awaited BC2 automation controller-- basically a mid-sized version of the company's BC1 controller with an updated IR chip.

The IR chip allows the BC2 to transmit a broader array of infrared signals than the BC1. Connectivity options include x2 USB, ethernet, x4 routable IR, x2 RS232, x2 relays and x2 I/O ports.

BitWise also adds a new browsable database with both common and obscure codes, a new standalone USB learner and the latest Project Editor version (1.9).
