iDevices announces as a simpler means for introducing customers to possibilities of connected devices-- Smart Home Essentials, a kit packaging ten light bulb adapters and plugs together with necessary support.

The specific devices included the Smart Home Essentials kit are x3 iDevices Switches (indoor connected plugs), x5 Switches (indoor connected plugs) and x2 Outdoor Switches (rain-tight connected plugs). All are compatible with Apple HomeKit and Alexa, and require no additional central hub or gateway.

A companion iDevices app allows users to add devices to home networks, securely pair them with smartphones or tablets, add them to a room, set dynamic schedules, and add custom photos and names. All devices are compatible with other products with HomeKit and Alexa support.

Also included with the package is an exclusive "Concierge Service" giving customers priority support and appointments with iDevices smart home expert, as well as personalised tips, tutorials and "exclusive promotions."

The Smart Home Essentials kit is available now.
