Samsung SmartThings and Leviton join forces in the name of a "powerful yet affordable" home automation bundle-- one featuring a SmartThings Hub, Leviton VRMX Z-Wave dimmer and a Leviton VRS15 Z-Wave switch.

Dubbed the STKIT-000, the package is ideal for customers wanting to dip their toes into the possibilities of connected home devices through smart lighting control. The SmartThings Hub carries both Z-Wave and ZigBee chipsets, allowing integration with a wide variety of devices, as well as control through 3rd party services such as Google Home and Amazon Alexa.

Of course integration with Leviton control devices comes as standard, and the use of mesh networking technologies allows for installations in larger homes with dozens of integrated attachment devices for whole house automation.

"At SmartThings, we're working to bring a diverse ecosystem of connected devices and services to users so they can create a smart home that fits within their unique lifestyle," the company says. "This partnership and bundle with Leviton, along with special pricing through Leviton's distribution channel, brings smart home options to an even wider market, including builders and other professionals."

The bundled kit is available now via the distribution channel.
