Crestron joins forces with Hatteras Yachts, a luxury yacht manufacturer, and technology integrator AHT to create a "world-class experience" with the M90 motor yacht outfitted with Crestron technology.

The technology supplied by Crestron allows one to control AV, lights, shades, pools and hot tubs, security cameras, motorised awnings and more with the simple touch of a button.

“Crestron and Hatteras both understand the importance of providing customers with versatility and a customizable experience when it comes to their unique transportation needs,” Crestron says. “People want to uphold the same comfort level and amenities they have at home while they travel. By utilising Crestron automation solutions they can experience the same quality of automation from anywhere in the world.”

Hatteras started making yachts in 1959 with the Knits Wits, the first fibreglass vessel over 12m long. It builds luxury motor yachts, sportfishing convertibles and the 45 Express.
