Savant Adds Google Home

The Savant smart home ecosystem gets another voice control option-- Google Home Assistant, allowing customers to activate Savant Scenes to control any smart home feature through a single voice command.

Google Assistant support was initially available on the Savant Pro Remote. The integration allows users to adjust entertainment, lighting, climate controls, TVs, shading and more through the power of voice. The company adds setup is as intuitive as possible, allowing users to create a Savant Scene, enable the Savant Action with the Google Assistant or Google Home app and link their account.

Google can discover an "action" that is easily accessible via voice command. The Savant scene engine also allows customers to initiate, schedule, edit or delete a Savant Scene while retaining Google voice control. The Savant Google interface is based on cloud-to-cloud communication between the two services, leveraging the Savant "robust, secure, redundant cloud interface."

"Our objective is to deliver the best smart home experience along with leading edge innovations that bring added value for our network of integrators and their clients," Savant adds. "Working with Google and bringing their voice technology to Savant homes accomplishes both without question."

Google Home support is available now on Savant systems.
