Crestron announces the DIN-THSTAT DIN Rail Mountable thermostat together with Professional Installation Cabinets, enabling installers to deliver clean, professional climate control installations.

The DIN-THSTAT provides 3-stage heating and cooling, support for x3 independent remote sensor inputs (through the Crestron CHV-RTS, CHV-RTHS, or CHV-RSS temperature sensors), full colour LCD display for easy setup and diagnostics, and flexible Cresnet communications. It installs in an equipment cabinet or a wall, and the cabinet can be flush or surface mounted.

Support for Crestron Pyng, D3 Pro and SIIMPL software make it easy to retrieve and upload full configurations, while a Crestron control system connection allows easy temperature adjustments from virtually anywhere via touchscreen, handheld remote or mobile app.

The Professional Installation Cabinets come in 3 sizes, and can contain up to 10 thermostats. Controls are exposed for easy access, and the provided service rail can be used for power supplies, ethernet to Crestron connectivity bridges, Cresnet wiring and more.
