Visiomatic brought to the IP Security Pavilion at ISE the first release of an intelligent solution for mobile video intercom.

The doorbell rings... and with **visiTor** the image automatically appears on your iPhone, iPad or iPod Touch. You can now talk directly with your visitor and open the door.

If you have multiple cameras installed, you can easily change between different views, e.g. monitoring the exterior of your home. As long as you stay within the wireless range of your home, visiTor is always ready for you.

All that is required for the visiTor app is the controller, an iPhone, iPad or iPod Touch with iOS5, a Video intercom system, for example from Siedle, and a wireless connection. If your intercom system is older, visiTor is compatible with most systems.

Communication with your iPhone or iPad is established via a WLAN connection-anywhere in your home or garden, visiTor is ready wherever WLAN is available.

In the basic version of visiTor up to five devices can be used at one controller. Additional devices can be added at any time via a license upgrade, additional hardware components are not necessary.
