---

Control4 launches the HC-250-- a sleek small form-factor controller ideal for single-room control systems or as a universal remote replacement.

It allows users to browse large media libraries, activate lighting controls and even control an entire house from their TV instantaneously.

Carrying a 1GHz processor, the HC-250 uses Power over Ethernet (PoE) connectivity and fits easily behind TVs, on shelves or in a rack.

It supports both digital audio and video over HDMI (x2 audio outputs-- x1 analog, x1 HDMI-- plus x1 analog audio input) and offers integrated Wireless-N wifi and ZigBee for high-performance wireless networking.

A USB port allows outboard connection to external storage, while control comes through support for up to x4 IR (or x4 IR and x4 serial) devices.
