HAI is now shipping its award-winning OmniPro II, Omni IIe, Lumina Pro, and Lumina automation controllers with five serial ports and flash memory (for easy firmware updates).

The OmniPro II and Omni IIe are part of HAI's Omni family of home control systems that feature built-in UL Listed security and fire systems, lighting control, temperature control and audio control.

The Lumina Pro and Lumina home control systems offer full lighting, temperature and audio control, but differ in that they do not include built-in security. The Lumina series is for homeowners who do not wish for security functions or who would prefer to integrate the automation and lighting benefits of the Lumina Pro/Lumina with an existing security system.

Both the Omni and Lumina family controllers may be controlled via telephone or over internet. There is no increase in price for the additional features in the Ethernet versions of the Omni and Lumina controllers.
