Remote Technologies Inc. (RTI) releases the newest additions to its line of control solutions with the launch of the T2-B Universal Controller and ZRP-6 Remote Control Processor along with the CPB-1 Control Port Connecting Block, PCM-8 Port Control Module and CB-8 Touchpanel Connecting Block.

Featuring a new, contemporary industrial design, the T2-B is a re-charged version of RTI's award-winning T2+ Universal Controller. With a customizable, easy-to-read LCD touchscreen display and a revised hard button layout for access to frequently used functions, the T2-B is a control solution for any media room.

The T2-B also features a new three-way rocker switch, allowing convenient navigation of onscreen guides and music, and extended battery life. While able to function as a stand-alone device, the T2-B is capable of serving as the heart of a complete control solution when used with other RTI components, allowing RF transmission through walls and cabinets, RS-232 control, contact closures and power sensing.
