

Fusions' New Server Platform is EPIC

Written by Marco Attard

Fusion Research launches a "significant" upgrade on its movie server system platform-- EPIC, the culmination of several years of work and a number of customer suggestions.

Together with a "brand new" UI, EPIC has a number of new features, such as EasyLoad. A simpler means of loading movies into the system, EasyLoad allows unattended movie loading for both Blu-ray discs and DVDs.

The system automatically imports movies as soon as one inserts a disc, with no need for button presses or menu selections.

An other new feature is Series Mode TV series management, now with an "entirely new" database system. It allows users to see just one entry for a TV series representing all show episodes. Once the user selects a series, the system shows a list with each season and episode.

Fusion says the EPIC platform has over 25 feature enhancements, and should be available for all Fusion servers in both residential and commercial applications.
