---

At InfoComm, ELAN, known in the home control market, introduced three new products to the **g! family** for light commercial installers.

The **VL10 Valet** is a 10" hard-wired tabletop and under-cabinet-mounted color LCD touch screen. With ELAN's 'touch and swipe' design for controlling the g! System, it also functions as a TV with the included analog video input. The ELAN VL10 Valet comes with 16:9 wide screen format, built-in speaker and microphone for messaging, IP connectivity for communication, flash memory, easy programming, a screen saver mode that can display photos-- and it works with all ELAN system controllers.

**ELAN S1616A Amplifier/Controller** is a 16-channel multi-zone amplifier/controller combining the functionality of the ELAN D16 amplifier and S128P multi-zone controller into one new component.

ELAN's **g!Tools** simplifies ELAN g! system installation and management by organizing all system documents, firmware, installation guides and support software in one place, according to the company.

Allowing dealers to store and share one-way IR and serial drivers, it provides a dashboard screen to view, monitor and launch into every g! system they manage from one location, whether on the PC at their office or on a job site.

This feature allows ELAN dealers to quickly check on multiple g! systems and offers the best access for managing and updating systems, as well as providing on-demand assistance to end users.

ELAN has also introduces **g!Mobile 5.5 software** for iOS devices.
