While some might insist mobile device apps will soon replace universal remotes, others prefer the traditional remote. Now Logitech combines both solution with the Harmony Touch remote.

The Harmony Touch has a centre-mounted 2.4-inch colour touchscreen with support for the tapping, swiping and scrolling controls, as well as a number of physical buttons. Users can access some options (such as volume control and channel selection) through both touchscreen and buttons.

A favourite channel menu allows the selection of up to 50 customisable channel icons, creating a visual twist on the familiar favourite channel lists.

The myharmony.com website allows simple setup, custom programming and syncing with previous Harmony One presets.

Providing what Logitech describes as "unprecedented control," the remote is compatible with 225000 devices and controls of up to 15 devices, including the the Logitech TV Cam HD system.
