VidaBox announces the "New LiivNAS"-- a more compact redesign of the LiivNAS Media System, now with silent cooling, up to 4TB of internal storage and Dune HD media player support.

Like previous models the LiivNAS carries a "Drop-n-Rip" drive for unencrypted CD, DVD and Blu-ray archiving, as well as 2-way movie metadata for Crestron and Control4 control systems.

Sonos Controller and iTunes installation support also comes as an optional feature.

The redesigned system is just 76mm tall, allowing installation in more space-limited setups. The previous model takes around 3U of rack space.

The New LiivNAS is shipping and available now.
