Cloud-based smart home control solutions developer On Controls adds Autonomic to Partners in Control (PIC), a program with aims for seamless compatibility between the On Controls platform and a "vast array" of connected device makers.

Partners in Control members come from all related residential segments, including audio, video, HVAC, security and lighting control.

Autonomic is known for its cloud-based whole-house music player, the Mirage Music Player. The system aggregates music files, including high resolution (24-bit/192kHz) digital music, and makes it available for the next generation of digital entertainment.

"The On Controls PIC program facilitates efficient integration of award-winning Autonomic products into the On Controls connected home environment," Autonomic says. "We are pleased to participate in this initiative and bring added value to our channel of integration specialists."
