URC presents a 2-way control module (or driver) allowing custom installers to install Total Control products in a KNX environment.

It works with most URC interfaces when using 2-way commands, 2-way queries, device events and macro control. Additionally is compatible with URC Mobile for both iOS and Android.

KNX is a standardized (EN 50090, ISO/IEC 14543) OSI-based network communications protocol for intelligent buildings. It is administered by the KNX Association and approved as a European (CENELEC EN 50090 and CEN EN 13321-1) and international standard (ISO/IEC 14543-3).
