Crestron starts shipping the TS-1542-- a 15.6-inch capacitive touchscreen featuring metal construction and Smart Graphics allowing for immersive large-format interfaces.

The touchscreen carries the feature-set from the award-winning TSW touchscreen line, as well as flexible installation options for in-wall applications or tilt tabletop stand.

HD streaming capability allows the viewing of security cameras and other video sources over the network, with native H.264 and MJPEG support handling the display of live streaming video from IP cameras, streaming servers or a DigitalMedia switcher. Installation is easy enough, since a single ethernet cable handles power, control and media.

“Our new 15.6-inch touchscreen provides dealers with a large canvas to integrate control of lights, shades, audio and complete home automation with streaming video, Rava SIP intercom, and web browsing,” Crestron says. “It’s the perfect solution for kitchens, home theaters, and other gathering areas that require multi-room control or a multi-use touchscreen.”
