

URC Ships Total Control TRC-820

Written by Marco Attard
20. 01. 2016

URC starts shipping the Total Control TRC-820-- an entry-level handheld control interface compatible with all URC System controllers, including the MRX-20, MRX-10 and MRX-8.

Programmable via Accelerator, the TRC-820 features graphical home automation system control, user-programmable shortcuts (allowing quick access to favourite devices) and live video on the 2-inch colour LCD from connected cameras from anywhere in the house. Unlike previous entry-level URC remotes, connectivity comes through regular wifi (not proprietary 2.4GHz protocol).

It follows the latest URC system controller, the MRC-8 bundled with URC mobile apps.
