Ray Enterprises turns to Global Caché to provide IP-to-IR adapters to the Ray Super Remote, the company's smartphone-esque universal remote.

Through the partnership the Ray Super Remote can also operate devices controlled by relay, as well as other any other devices with support for the Global Cache IP-enabled Flex controllers.

"This is a big step forward for Ray in the professional installer and integrator market," Ray Enterprises says. "Providing a seamless integration with Global Caché's products is a key milestone for Ray to solidify its position as a powerful control solution for highly sophisticated living room setups and extending to devices throughout the home."

The Ray Super Remote promises to simplify the universal remote concept through a mostly touchscreen-only design reminiscent of the iPhone. It features a 4.8-inch colour display and easy to use menus, while built-in wifi and Bluetooth connectivity allow for easy programming.
