Picturall Ltd. presented their Picturall Octo media server at Prolight + Sound in Frankfurt.

For multi-screen video installations, Picturall Octo can run eight DVI outputs from a single media server and use media resolutions beyond FullHD.

With a robust video engine with playback performance up to eight layers of Full HD video, Picturall Octo has a custom codec and built-in encoder for very high resolutions, up to 6144 x 2568.

It runs on Linux OS and is controllable via DMX, Artnet, serial, ethernet and Java-based control software
