Danish company Neets, manufacturer of AV control systems, develops a new power control–1 relay box. Technically you get a 12VDc 0.6W (on power) relay, a contact rating on 16Amp @ 230VAc and a fuse size at 8A-T (5*20mm).

With this power control you get a unique possibility to make your installation power saving and environment friendly. At the same time using the power control in your installation minimizes the risk of fire.

Installed with a Neets Control System, the relay box is designed to cut power from the projector, amplifier, DVD and other audio visual equipment when the devices are not in use. The power control can cut power from two units at the same time. This gives you the possibility to cut of the expensive standby power and furthermore the risk of fire is minimizes when the power is cut.

Says Neets: "In these environment friendly days this power control will be a very good extra detail in your installation, making your project environment friendly and in the end adding another satisfied customer to your portfolio."
