

RTI Intros Driver for MuxLab Solutions

Written by Marco Attard
16. 11. 2016

RTI releases a 2-way driver for the MuxLab ProDigital AV over IP product series, allowing installers to easily incorporate MuxLab devices into RTI automation and control solutions.

The driver is ideal for both residential and commercial installations, and provides direct access and control of the MuxLab ProDigital Network Controller (model 500811) and input/output extenders, as well as the company's video switcher selection, through RTI user interfaces. Meanwhile the driver for MuxLab AV over IP extenders allows control of up to 128 output devices, 64 input devices and 128 videowall configurations and presets via IP.

For video switchers, the driver enables the switching of 4, 8 or 16 inputs and outputs via RS-232 or IP.

"Signal distribution and device management for large video installations can be very challenging," RTI says. "Our new MuxLab driver substantially reduces the complexity and allows our dealers to integrate MuxLab AV over IP systems into an RTI control system. The result is a fantastic user experience no matter how massive the installation-- even up to 64 x 128 videowalls."

The driver is available now for free on the RTI website.
