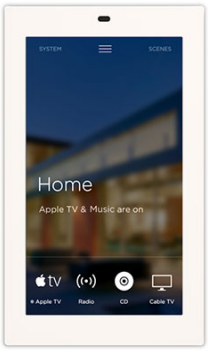
Savant announces a product line it calls Wally-- dedicated touchscreens providing intuitive access to smart home features, designed to blend seamlessly into any decor.



The Wally touchscreen line features high-resolution colour displays based on technology from the Savant Pro Remote. It can control integrated climate, advanced lighting, entertainment and even activate Savant Scenes. An integrated presence sensor activates the touchscreen automatically as a person approaches.

The first Wally product available is a single gang 5.5-inch touchscreen offering complete home control and high-resolution graphics. The Wally line is simple to install, fitting in a traditional single gang enclosure and low voltage powered using Power over Ethernet (POE 802.3af).

Wally touchscreens are available in white or black, and should start shipping from June 2017. Later this year we'll also see the launch of 2.9- and 8-inch versions.
