RTI starts shipping the CX10-- a touchpanel ideal for both residential and commercial applications with a 10-inch capacitive 1280 x 800 LCD touchscreen, integrated HDBaseT input and stereo speakers.

The touchscreen is easy to mount on a countertop or beneath a cabinet, and has a display tilt range from 10 to 90 degrees for the best viewing angle possible. Further features include video intercom support, built-in composite input to view video from security cameras and other devices, an ambient light sensor to adjust backlighting for est visibility and a proximity sensor to automatically wake the panel up.

Installers get wired 10/100 HDBaseT and wifi support for seamless setup, two-way control and feedback, and convenient programming updates. Power comes through either separate power supply or Power over Ethernet Plus. The UI is customisable using the RTI Integration Designer APEX software to meet the specific needs of any installation.

The CX10 is globally available now.
