Crestron announces the HR-310 handheld touch remote and the TSR-310 handheld touchscreen remote-- both combining features from previous Crestron remotes with a better ergonomic design, button feel and voice control.

The HR-310 features backlit tactile buttons and a long battery life using standard AAA batteries. It offers 9 custom-engravable buttons to display the most frequently used functions, and connectivity comes through the Crestron infiNET wireless gateway.

Meanwhile the TSR-310 features a built-in 3-inch touchscreen with "stunning" resolution. A rechargeable battery powers 3-4 days of use on a single charge (discreet charging station included), and wifi connectivity allows for high-bandwidth communications. Voice control is also included.

The HR-310 and TSR-310 are available now.
