Extron starts shipping the TLP Pro 1025T-- a 10-inch tabletop TouchLink Pro touchpanel featuring a redesigned touchscreen, quad-core processor and 8 times more memory.

The 12800 x 800 capacitive touchscreen is built with scratch- and smudge-resistant Corning Gorilla Glass and a new enclosure design with a sweeping back. Power over Ethernet (PoE) allows it to receive power and communication over a single ethernet cable, making the touchscreen ideal for environments demanding a tidy installation.

Extron adds the TLP Pro 1025T is futureproof, thanks to an improved graphics engine, quad-core processor and increased RAM allowing for faster background graphic loads and page flips. All TouchLink Pro touchpanels are customisable using Extron GUI Designer software.
