RTI announces an integration with the modular 2N IP Verso and compact 2N IP Solo IP intercoms-- allowing customers to use them with any RTI control device with video intercom capabilities.

The 2N IP intercoms combine door control with hidden cameras providing sharp video even at night, thanks to high-resolution settings and infrared backlights. Users can connect additional external IP cameras to the intercom in order to cover all blind spots. Meanwhile the 2N IP Verso can be customised further through the addition of modules, including a Bluetooth reader, fingerprint reader and touch display. The 2N IP Solo offers a compact design with just one button.

Bringing the IP intercoms into the RTI ecosystem allows users in both residential and commercial environments to answer video calls and control doors from video intercom-compatible RTI controllers. Supported devices include the KX3, KX7 and KX10 in-wall touchpanels, the flagship T3x intercom-enabled handheld controller, and the CX7 and new CX10 countertop/under-cabinet touchpanels.
