RTI announces a driver for the IP control of select 2017 and 2018 Samsung 4K UHD TVs, starting with the NU8 series and including the entire QLED series and The Frame TV.

The driver delivers control over the DTV tuner and onboard DirecTV interface of Samsung 4K UHD TVs, in addition to direct one-button access to streaming sources such as Hulu and Netflix on the displays. Users can control the TVs via RTI interface of choice, with feedback on volume levels, programming and more.

By connecting to the Samsung displays via network, the driver eliminates the need for installers to run additional IR emitters or serial cables. It also simplifies the integration of Samsung TVs into RTI automation and control systems, providing customers with a full-featured control experience.

Additionally, RTI offers a driver for the Samsung UBD-M9700 UHD Blu-ray player.
