Extron presents the NBP Decorator series Network Button Panels-- a product family bringing convenient, easy-to-deploy control to a broad variety of AV applications.

Network Button Panels connect to a control processor using standard ethernet. The customisable control panels work in conjunction with an IP Link Pro control processor HC 400 series system to perform a wide range of AV system functions, including display on/off, input switching, volume control and more. The buttons are easily customisable using an online Custom Button Builder Application, while PoE allows for both power and communications over a single ethernet cable.

The NBP 105 D, NBP 106 D, NBP 108 D and NBP 110 D are single-gang decorator-style button panels with five to 10 backlit buttons. They ship with black and white wallplates and mud rings for easy installation.

The NBP Decorator series panels are shipping now.
