The RTI product lineup for CEDIA Expo 2019 includes new controllers with sleek designs and capabilities, as well as the next generation of Alexa voice control and a variety of AV distribution solutions.

Handheld controllers on show include the T4x-- a remote controller featuring a sophisticated design, high-resolution 4-inch capacitive touchscreen and fully programmable soft-touch buttons. It also includes grip sensors, wifi and dual RF. For environments too harsh for standard remote controls RTI has the U3 weatherproof controller. It has an e-Ink display and uses inductive charging and wireless programming updates, allowing for a completely sealed unit. Also on show is the Pro Control Pro24.z, now available in glossy or matte finishes.

The KA8 and KA11 tabletop/wall-mountable touchpanels will be on display. The units combine a widescreen LCD display with an integrated capacitive touchscreen for fast touch response and gesture control. The KA11 features an edge-to-edge design at 11.6-inches with full HD resolution, while the KA8 offers a WXGA resolution 8-inch touchpanel.

For the next generation of voice control, RTI offers native Alexa control bringing new functionality and power to customers. From the environment to entertainment, users will be able to more discretely adjust their surroundings.

Making a CEDIA Expo 2019 debut is the CP-16i-- an audio distribution system compatible with virtually any other system. It provides 100W of power to 16 channels, and offers bridgeable audio output for increased power. The unit features thermal overload and overcurrent monitoring, as well as Class-D amplification for efficient heat dissipation and low power consumption. The amplifier requires only one rack space, and allows for both rackmount and freestanding installation.

RTI video distribution solutions at CEDIA Expo include the flagship VHU-8x 8x10 HDBaseT matrix switch able to deliver UHD 4K HDR video with 4:4:4 chroma sampling over a single Cat cable at distances up to 100m. RTI will also highlight the VHD-4x and VHD-8x matrix switches and the VMS-741 quad multi-viewer.
