"Russound has a 50+ year history of leadership in distributed audio, and our award-winning MCA controller amplifiers embody our latest innovation, featuring analog and digital source switching, (including Bluetooth), integrated amplifiers, 12 volt triggers for home theater and power management, and the choice of fixed or variable output settings on select audio output channels," Russound says. "Now that our MCA products feature two-way communication with URC Total Control system, our already flexible audio distribution system provides even more options for custom installers."

Available only via direct dealers, Total Control 2.0 is the URC smart automation and control system. It offers superior performance, highly customisable GUIs and robust 3rd party integration. It is also ideal commercial facilities such as bars and restaurants, conference rooms and executive offices, common areas & amenities spaces in multi-dwelling units, hospitality and classrooms.
