ELAN announces an entry-level system controller-- the SC-100, designed for smaller installations requiring single-point control for media, climate, lighting and other single tasks.

Powered by a quad-core processor, the SC-100 can also be deployed as an intelligent extender for larger ELAN installations using gsC series controllers. Shipped either by itself or as a bundled solution with the sleek ELAN HR10 handheld remote, it allows customers to use one remote to manage all media and entertainment in one room while the ELAN mobile app allows control and automation of lighting, temperature and door lock systems in the home.

With interfaces for device control over IP, RS232 and IR, the SC-100 is an ideal means for integration with most popular brands. Cloud management provides installers with visibility and control over all deployed systems, as well as ensure all software is up to date, while the compact design allows easy installation in cabinets, structured wiring cabinets and even behind displays.

The SC-100 is available now.
