AC Ryan follows on its Playon series with the Fluxx media player-- its first player with Intel's Atom CE4150 processor.

The Flux carries a 1.2GHz processor, 400MHz Extreme graphics, 1GB DDR3 RAM and 2GB NAND flash memory. An optional internal HDD expands storage to 2TB.

Wifi and ethernet connections allow for networking and internet capabilities-- from local access content over network to internet through internal browser. It also supports keyboard and mouse control through x2 USB ports, as well as control through Android or iPhone smartphone.

A/V outputs include HDMI, Composite, YPbPr component and SP/DIF.
