See and Touch Marbella reveals its Creation controller range-- including wall pads and an armchair-mounted joystick.

The Creation wall pad not only switches on lights through a wave of a user's hand, but also includes button controls (controlling anything from curtains to tvs and media systems) relaying signals via IP to any control system. It can also forward Beo4 remote IR signals.

Similar to the wall pad is the armrest-mounted joy stick on Creation's TV and Cinema chairs. Users can use it to access all the controls found on the wall pad, as well controlling the chair's motorised back and leg rests.

Tying the controllers together is the Creation menu, which users can summon on their screens (supplied with the Creation graphic, internet and cinema graphic clients). The menu system is not only compatible with the Creation range, but also with an iDevices and all major remote control and touch panel brands (including Crestron and RTI).

Creation also announces a client and server range, powering the Creation menu, internet connections (through internet client) and 3DTV capability (through the Cinema Graphic Client). Meanwhile the Creation Server & Storage delivers video and audio on demand to up to 30 rooms.
