Control solution developer Thinkflood introduces a Pro version of its RedEye iDevice remote control system, in a professional, rack-mountable form factor.

The RedEye Pro comes with x8 dual-purpose 3.5mm emitter/contact closure sensor ports and x4 contact closure relays, alongside x2 RS-232 ports. It also carries ethernet connection (via RJ45), x4 USB ports and wifi support.

The only other control requirement is an iPad/iPhone with the free RedEye app, which includes an extensive device code library. A single Pro unit can handle multiple iDevice controllers, as installers can divide ports to control multiple rooms. One can also combine more Pro units together if more connectivity is required.
