

Borg Goes Micro OEM

Written by Marco Attard
01. 03. 2011

In-wall touch-controller manufacturer Borg Displays starts what it calls the Micro-OEM program-- allowing professionals, application providers and OEMs to order customised version of its Protégé touch controllers.

Any aspect of the device can be changed-- from company and brand logos to icons, bezel colour, look/feel, button integration and boot up splash screen in the respective OS.

Orders can be as small as required-- even up to a single unit.

Borg's interface solutions run on either Windows XPe, WinCE and Linux, and come in 4", 6", 8", 10" and 15" sizes.
