Aldous launches 3 new in wall iPod/iPhone docking stations, each providing different capabilities for clients' installations.

The AO314D comes with a balanced line level output for long cable runs between main dock and output plate over Cat5e, and provides charging and IR control for the connected device.

The AO314 is ideal for any A-BUS-based multi-room audio solution. It comes with a RJ45 A-BUS-ready input, and one can even set it up as an A-BUS local source.

Finally the AO316 has full 2-way RS-232 control capability for 3rd party control system integration, alongside all the features coming in the AO314D docking station.
