The SB-6560HD is the "largest true outdoor TV" from SunBriteTV yet-- a 65" LCD TV with rugged all-weather construction able to withstand extreme environmental condition making a debut at InfoComm 2012.

Ideal for both residential and commercial installations, the SB-6560HD features durable powder-coated aluminium construction and an anti-reflective UV-coated front glass protecting the LED panel. It resists moisture, rain, snow, dust, insects and temperatures ranging from -31 ° to 50 °C.

A filtered multi-fan airflow system ensures internal climate control, while a watertight sealed pass-through cable entry system keeps cables dry and allows easy installation.

Inputs includes x2 HDMI, component A/V, S-Video and composite, RF CATV/antenna connection, stereo audio and VGA. Control comes through RS232 port and discrete IR input.

The TV is wall-, ceiling- or pole-mountable (via SunBriteTV mounts), and comes with a 20W detachable speaker module and a moisture-resistant remote control.
