Peerless-AV announces a universal solution for the securing of flat panel screens in your customers' homes-- the Stabilis home safety kit.

Fitting 32- to 60-inch LCD and Plasma displays (with telescopic height adjustment), the Stabilis either clamps to furniture or screws directly to TV cabinets or walls.

A rotating mounting plate allow customers to swivel the screen, while the rigid design prevents displays from tipping backwards. Being "one size fits all" it is compatible with new flat panel displays as well as existing TV models.

It is also ideal for preventing accidents and can also delay theft by securely attaching TVs.
