Planar Systems says 3D Building Information Modeling (BIM) models of select Planar large format LCD displays and video walls are now available free through the Autodesk Seek web service.

Autodesk Seek allows architects, engineers and designers to easily find, preview and download 3D models of Planar displays. They can then incorporate these models into their building plans without having to create the models themselves.

3D BIM models of three Planar product families are now available from the Autodesk Seek online content library, a web service that supplies free BIM models from a wide range of building product manufacturers. The models include

Planar Mosaic

architectural video walls,

Clarity Matrix

LCD video walls and

Planar UltraLux Series

large flat panel monitors.

Each of these BIM models provides data-rich drawings and product specifications that accurately depict the displays and their options within **Autodesk Revit**, a market-leading 3D design platform.
