

Audipack of Netherlands will exhibit at CEDIA in London for the first time. The event will herald the UK launch of a number of new products including the Spektra range of brackets and the Clo X Arm.

The Spektra range is a collection of European manufactured brackets for LCD and plasma panels. Some of the products in the range incorporate clever features to simplify installation, including measuring rules and spirit levels for accurate positioning.

The new Clo X Arm is a fully motorised bracket for LCD/plasma screens up to 65" (1650 mm) in size. The arm allows the display to be angled up and down or side to side to achieve the optimum viewing angle.
