

Future is Up: New Plasma Lift System

Written by Bob Snyder
01. 08. 2008

Future Automation will be exhibiting its range of moving panel mechanisms at CEDIA along with its full range of manual and automated wall mounts, plasma lifts, and projector drops.

Special attention should go to a new plasma lift system that is set to offer “unheralded functionality and space saving advantages.” New products will also include the launch of Future Automation's new projector mechanism along with the first UK showing of its electric bi-directional swivel brackets.
