

FD Wipe

FD Wipe is literally "a solution"-- a liquid solution that can be used to clean plasma, LCD/LED (Touch) monitors, tablets, smartphones and many other display surfaces.

It removes bacteria, vaporizes quickly without streaks, and comes in 500ml spray bottles for longer lasting usage. No ammonia, no abrasive materials and not at all flammable.

FD Wipe was not intended to be sold outside of FD. FD Wipe was developed to speed up the production process for their own assembly of touch monitors. The company says assembly time decreased 40% with 100% clean displays. Their Touch screens never had a touch monitor returned because of contamination between glass and LCD surface. It worked so well...well, why not sell it to others?

So now they are looking for dealers and distributors and that's where you come in if you are tired of dirty display glass.
