TP Vision launches the Philips 65PUS9809-- a flagship 65-inch Android-powered UHD TV featuring the Pixel Perfect picture quality engine to provide "razor sharp, detailed pictures with great depth and contrast."

The Android OS allows access to the Google Play app store, while the Philips Ultra Resolution upscaling engine handles non-UHD content.

Also included are Micro Dimming Premium and Bright Pro features boosting contrast to deliver the brightest whites and deepest blacks. According to TP vision Micro Dimming Premium "accurately analyses each picture and adjusts the direct LED backlight, which is split into 144 segments, accordingly."

Audio comes through "high-class" acoustic enhancement complete with a by-packed wireless subwoofer.

The 65PUS9809 will be available in European markets from Q3 2014.
