

Peerless-AV Adds Display, Projector Ceiling Mounts

Written by Marco Attard
13. 08. 2014

Peerless-AV announces a new line of ceiling mounts designed for flat panel displays and projectors, with 3 products ideal for both residential and commercial applications.

The line consists of the ST940-EXA/B/C (in 3 extension lengths handling 22-40-inch displays), the PJF3-UNV (Flush Mount) and PJF3-EXA/B/C ball-and-socket-style projector mount, and the PRG3-EXA/B/C precision gear-style projector mount.

All feature an aluminium column making them 60% lighter than traditional steel designs according to the company. The column also acts as an internal cable management system, with a cosmetic ceiling plate cover completing a seamless look.

Display height and tilt adjustment is tool-less, and combined extension ranges from 13- to 43-inch. The mounts are also OSHPD and UL/CUL certified, making them safe and reliable in all environments.

The new Peerless-AV ceiling mounts will be available from late August 2014.
