Stealth Acoustics announces the European debut of the Stealth Patio Theatre (SPT) takes place at ISE 2016.

The SPT is a weatherised and fully protected outdoor cinematic system integrating a large high-resolution LED display with Stealth Acoustics IP-68 rated loudspeakers and subwoofers coupled with Stealth Acoustics amplification and DSP. Quiet-running lift automation hides the display in a custom-designed sealed enclosure when the SPT is not in use.

A 1080p system processor handles playback from up to 7 sources, including a Blu-ray player and streaming services. Installers can also integrate the system with 3rd party control systems.

Designed for installed outdoor use, the SPT is available in 3 screen sizes-- 103-, 130- and 150-inch. Enclosure options range from above ground cabinets to custom-built units matching existing outdoor elements.

"SPT opens up another significant market opportunity for European custom installers," Stealth Acoustics says. "Unlike re-purposed and usually delicate indoor projectors and screens, SPT systems are specifically designed to cope with the vagaries of the European climate and still deliver great, reliable performance. The Stealth Patio Theatre reliably reproduces vibrantly bright and colourful images, even in broad daylight."
