Hisense announces a second generation of ULED 4K TVs-- the M7000 range, with flat displays available in 55-inch (H55M7000) and 65-inch (H65M7000) sizes.

The TVs handle 4K/UHD resolution images with HDR, dynamic contrast ratio of 4000:1 and 240-zone local dimming. Also included is the Hisense Smart platform as powered by a quad-core processor and online connectivity via either wifi or ethernet.

The Smart platform includes BBC iPlayer, Amazon Video, 4K Netflix and Wuaki.tv apps, together with a web browser and support for Anyview Cast and Anyview Stream for integration with mobile devices. Media playback comes through a wide range of video formats, such as MKV, FLAC and WMV.

Connectivity comes through x4 HDMI inputs, 2 of which are HDMI 2.0 with HDCP 2.2.

Both M7000 series TVs are available now.
