Sanus announces the VTVS1-- a universal TV stand ideal as a replacement for manufacturer-supplied TV bases, since it provides both swivel and height adjustment.

Designed for customers who either don't want to or simply cannot mount their TVs on walls, the VTVS1 should prove useful if the supplied TV feet do not fit the current living room AV furniture. It suits both curved and flat TVs, and features a slim, low profile base acting as a cable management system.

The stand holds almost any TV ranging from 32- to 60-inch in size, with weight of up to 27kg. Fixing the mount requires 3 steps, and once attached users can adjust height by 115mm and swivel by up to 74 degrees. It is also compatible with the Sanus Small Parts Panel for the mounting of media players such as the Apple TV or Roku behind the screen.

The VTVS1 should be available by end November 2016.
