Sanus takes on increasingly slim TVs with a slimmer mounting solution-- the VLCF613-B2, a mount sitting just 47mm from the wall when folded flat, complementing modern TVs.

The VLF613 fits TVs between 40 and 80-inch, and has full-motion capability allowing one to extend the screen 342mm into the room, with total swivel of 50-degrees. Virtual Axis finger-tip control enables the tilting of the screen by -8-degrees for an optimum viewing angle if the screen is mounted above eye level.

The mount incorporates ProSet post-installation height and level adjustments for further position fine-tuning following attachment to the wall. An integrated cable sleeve provides cable management, while recesses in the arms hide cables. The wall-mounted section of the unit hides the mounting hardware behind decorative hardware covers, and a dual-rail open wall plate provides ready access to wall sockets.

The VLF613 is available from February 2017.
